ULTIMATE ERP GUIDE

INTEGRATED ACADEMIC INFORMATION AND FINANCE MANAGEMENT SYSTEM
(For versions 3.6.X and above)

Optimum Computer Systems Team

Guide in the use of modules

7/31/21

Revised Edition 2

© Optimum Computer Systems Ltd 2019

Disclaimer

This document is a manual of the Ultimate ERP by Optimum Computer Systems; it is a guide and offers brief directions on how to use the ERP in the modules covered herein.

The versions of the system change from time to time after updates and some of the guidance given here may vary, be removed from the ERP system or given a different related function.

8.3.3 Operations 54
1. Store requisition 54
2. Stock acknowledgement 54
3. Stock level 54
Appendix 55

1.0 INTRODUCTION

Ultimate ERP is an Enterprise Resource Planning (ERP) System used in management of academic information and monitoring of financial transactions within the institution. The Ultimate ERP is divided into modules. A module is a separate software component and functions with other components of a system. A module is used to handle a specific number of tasks or functions. The ERP has the following modules in its entirety;

- Student management
- Examinations
- Finance
- Asset management
- Human resource
- Procurement and stores
- System administration
- Student portal

1.1 STUDENT MANAGEMENT

This covers admission of new students, reporting of continuing students, attendance sheet for the units/subjects taught, and setting up of classes, programs, departments, campuses, examination bodies and class statuses. The student module has different reports that will be covered in the next pages.

1.2 EXAMINATIONS

The examination module handles marks input, curriculum setup, unit registration, student reports, setup of subjects and grading.

1.3 FINANCE

This is the largest module taking data from almost every other module. It handles student receipting and invoicing, customer receipting and invoicing, preparation of payment vouchers and vendor invoices, budgeting and finance reports.

1.4 HUMAN RESOURCE

This is used to capture lecturers' information in order to assign them units/subject they teach or lecture.

1.5 SYSTEM ADMINISTRATION

This is used in initial setup of the system. It is used to capture data including system logs, users and assigning them rights and initializing of finance and academic setups.

The modules discussed here in brief will be looked at in details in the following chapters.

2.0 SYSTEM ADMINISTRATION

System administration is used to set up the system before initial use. These settings must be done before any operations on the system.

2.1 MAIN SETUP

Go to system administration then main setup

This has general settings, SMS configurations and advanced settings

NOTE: The General settings have the database synchronization button that is initiated whenever there is a new update of the ERP.

2.2 MANAGE USERS

This is used to add new users, resetting of passwords, and most importantly, giving rights to the new users. Rights give users access to the areas where they are involved with in the system.

To add a new user, press the '**New'** button and enter the details of the user and check on the relevant rights of the user. Click '**Save**' after all the details are entered and rights are assigned.

To reset a password, select the user from the list of users, then click on the '**Edit**' button. Delete the **'confirm password'** characters then delete the **'password'** characters, in that order. Enter the new password then confirm the password.

NOTE: Users who have entered student data into the ERP **cannot** be deleted but their accounts can be closed. To close an account, click on the user to be closed/deactivated, then click on '**Edit'**. Click on '**Closed'** checkbox to deactivate the account then '**Save'**. To view the full list of all users including those deactivated/closed, ensure that the checkbox labelled '**Include old'** is checked then click on '**Apply'** or press '**Enter'** key on the keyboard.

2.3 GENERAL

Has the following setups:

2.3.1 Academic year

This is used to set the new academic year and view the previous academic years. To view previous academic years, ensure that the checkbox labelled '**Include old'** is checked then click on '**Apply'** or press **Enter** on the keyboard.

To add new academic year, press the '**New**' button and enter the details of the new academic year then click save. The **Notes** section is used to add any additional information concerning the data entered.

NOTE: while entering the academic year details, be keen on the dates. This information is used across the entire ERP including Finance.

2.3.2 Semester setup

Used to set the semester name, duration and the academic year within which the semester falls. It is also used to view the previous semesters. To view previous semesters, ensure that

the checkbox labelled '**Include old'** is checked then click on '**Apply'** or press '**Enter'** on the keyboard.

To add a new semester, click on the 'new' button and enter the details of the semester.

NOTE: A new semester falls within an academic year therefore the academic year must be set first before you set the semester. The semester's 'start' and 'end' dates must be set correctly.

2.3.3 Intake setup

The intake setup is used to set the dates and months when the institution has intakes including the duration of that intake. To set a new intake, click on '**New'** button and enter the details as prompted then click '**Save'**. To view past intakes, ensure the '**Include old'** checkbox is checked then click on '**Apply'** or press '**Enter'** on the keyboard.

2.4 FINANCE SETUPS

2.4.1 Setting up sponsor list

Sponsors are those institutions or persons involved in payment of student fees. Examples include the government in form of grants e.g. HELB and Non-governmental organizations.

To add new sponsors, first, set up the sponsor types. Go to **Sponsor types** and click '**New**' to add sponsor types. Add sponsors by clicking on '**New'** and enter the details then '**Save'**. Some details exist as dropdowns for the user to select the appropriate one.

2.4.2 Setting up imprest payees

Imprest payee is a person to whom money is paid or is to be paid, hence, money is advanced to them for later surrender of the same amount and is normally a list of employees within that institution or organization.

To add a new imprest payee, click on **imprest payees** then '**New'**. Enter the details prompted then click on '**Save'**.

NOTE: if an employee is not liable for an imprest or is no longer an employee of the institution, it is advisable **not** to delete their data but close/inactivate the person as an imprest payee. To inactivate an imprest payee, double click on the payee then mark the checkbox labelled '**closed/inactive'** then click '**Save'**.

To view the whole list of imprest payees including those who are inactive, mark the checkbox labelled include '**closed/inactive'** then click '**Apply'** or press the '**Enter'** key on the keyboard.

2.4.3 Setting up customer list

To set up customer list

- Set up the customer types; go to **Customer types** then enter the details then click **Save**
- Go to **Customer list** and click on **New** to enter the details of the customer then click **Save**

NOTE: If a customer is no longer active, double click on the customer to bring up their details then mark the checkbox labelled closed. To view a list of all customers including those that are closed, mark the checkbox labelled include old and click apply or press enter on the keyboard. Students are **not** Customers; customers are organizations or persons who purchase other services and products offered within the institution.

2.4.4 Setting up vendor list

Vendors or suppliers are business entities which supply the institution with goods and services. This may contain a list of government affiliated bodies, persons, non-governmental bodies or a mixture of all the named.

2.4.4.1 Adding vendors one by one

- Set up the vendor types by clicking on '**Vendor types'** then '**New'**, click '**Save'** after entering the vendor type details
- Set up the vendor list by clicking on the '**Vendor list'** then clicking on '**New**', enter the vendor details then click on **'Save'**.

2.4.4.2 Using excel import to input vendor/suppliers' list

Vendor list can also be added via an excel import. This method is most beneficial when the list to be added comprises many vendors. Follow the steps below to add vendors using excel import:

1. Create your excel sheet to have the following columns. Save the excel sheet in a location in the PC for later retrieval and upload.

ACC NO	NAME	TYPE	EMAIL	TELEPHONE	ADDRESS

   The ACC NO is the vendor/supplier code. The system does not generate the supplier codes. Two vendors cannot have the same ACC NO. The spelling and casing must be as shown above. The TYPE must be of the same vendor types as set in the ERP under **vendor types**.
2. Add the details of the vendors into the excel sheet according to the column headers and save
3. Open the ERP, log in and go to **System administration → Vendor list → Excel import**
4. Browse the location of the excel sheet from where it was saved, enter the right sheet name then click on '**Populate excel data'.** This shows the data retrieved from the excel sheet selected.
5. Click on '**Validate fields'**
6. Click on '**Process'**
7. If any data was not uploaded into the ERP, the data will be displayed on the table. This data can be exported to excel sheet by clicking on '**Export to excel'** for further scrutiny.

2.4.5 Fiscal year setup

The fiscal year is the same as the financial year. This varies from institution to institution.

To set up a new financial year:

1. Click on '**Fiscal year'** then click on '**New'**
2. Enter the name e.g. 2019/2020, the **Effective date** and the **End date**
3. Select '**GLOBAL'** as the ledger from the dropdown and click '**Save'. GLOBAL** is the general ledger in the ERP.

Only active fiscal years will be shown in the list, to see all financial years including past ones, mark the '**Include old'** checkbox and click '**Apply'** or press **Enter** key on the keyboard.

2.4.6 Account setup

Account setup is used to feed in the chat of accounts as advised by the institutions finance department personnel and set precedence in the account vote-heads involved in the fee structure.

While setting up the chat of accounts the following are put into consideration

1. The code of the account: codes are such that if the parent account has a code of let's say 10.00 then its sub accounts will have codes of 10.01, 10.02 and so on. The sub account will automatically be classified as a sub account of the parent account in the list of chat of accounts. All parent accounts are in bold indentation.
2. The class of the account i.e. Income, expense, liability and asset
3. Whether it is a parent account or a child account (sub account)
4. Whether it is student related or non-student related
5. If it is considered as a budget vote, meaning, it is an account that is budgeted for each financial year

2.4.6.1 Adding a new account

To set up the chat of accounts, click on '**Accounts setup'** then **'New'**, create the parent accounts first by entering the details prompted then **'Save'**. Enter all the accounts details while considering the code numbering stated in section 2.4.6 under bullet 1 above.

2.4.6.2 Setting precedence of student related accounts

After all the accounts are set, the accounts that are marked as '**Student related'** are those that exist under the institution's fee structure. To set precedence of the vote-heads marked student related, click on '**Set precedence'** and drag the accounts up or down into position according to the precedence set in the fee structure then '**Save'**. The precedence gives information to the ERP about which amounts to consider first whenever a student makes a payment.

2.4.6.3 Closing an account

Accounts **cannot** be deleted in the ERP but they can be closed. Issues that may warrant this include the account being dormant, the account being wrongly entered or the account is no longer functional.

To close an account, do the following;

1. Select the account then click **'Edit'** or double click on the account in the list. This brings up the account details

2. Then mark the checkbox labelled '**Account closed'** to close the account then '**Save,'** (doing the reverse will reactivate the account).
3. To view the list of all accounts including those that are closed, mark the checkbox labelled '**Include old'** then click '**Apply'** button or press **Enter** on the keyboard. All the accounts that are closed will be highlighted in red.

2.4.7 Ledger setup

A ledger is a book containing accounts in which the classified and summarized information from the journals is posted as debits and credits. To set up the ledgers, click on **Ledgers/dimensions** menu item and then click on '**New'**. Enter the ledger name and '**Save'**.

2.4.8 Payment modes setup

Payment modes are created while considering the following information

1. The payment mode name
2. The payment mode ledger i.e. the ledger affected by the stated payment mode
3. The account number (not a requirement)
4. The asset accounts
5. Whether the account is used to receive payments or used to make payments or both.

To set up the payment modes;

Click on '**Payment modes'** on the menu to access the payment modes setup interface

Click on '**New'** to enter a new payment mode

Enter the details of the payment mode while considering the information listed in 2.4.8 bullet 1 above then click on '**Save'**. Payment modes can be deleted but it is advisable to close them instead. To close a payment mode, double click on the mode then mark the checkbox labelled '**Close (inactive)'** then **'Save'.**

2.4.9 Setting up P.V prefixes

These are ledger short codes or the voucher prefixes. To set up a new prefix, click on '**P.V prefix'** then '**New'**. Select the ledger from the drop down, enter the code then '**Save'**.

2.4.10 Fees setup

Fees setup concerns setting up the invoices for the students for the semester selected.

2.4.10.1 Prerequisites for fee setup

1. Ensure that the semester is set
2. Ensure the classes to be invoiced are created with consideration of their start and end dates (check section 3.1.7 on how to set up classes)
3. Go to '**Fee setup'** and click on '**Generate semesters'** and wait for the ERP to finish processing
4. Check if the classes to be invoiced exist.

NOTE: If the classes does not exist in the list after generation of semesters is complete, go to **Student management** and check if the class' start and end dates are set correctly and if the class status is set as active.

2.4.10.2 Doing the fee setup

Fee setup can be done in two ways'

1. Invoicing one class at a time
2. Or invoicing many classes at once

2.4.10.3 Invoicing one class at a time

1. Go to '**Fee setup'** and click '**Generate semesters'**
2. After the process is complete, enter the class code of the class to be invoiced in the search boxes then click '**Apply'** or press **Enter** on the keyboard. You can also invoice per department, per program or per student type i.e. GSSP or PSSP
3. The class will be shown on the grid, if it does not, check section 2.4.10.1 above.
4. Select the class (should be highlighted in orange after selection) and click '**Edit'** or double click on the class. While selecting, take note of the student type i.e. GSSP or PSSP
5. Fill in the amounts per vote-head and click '**Save'**

2.4.10.4 Invoicing many classes at once

1. Go to '**Fee setup'** and '**Generate semesters.'**
2. After the process is complete, enter the class code of the class(es) to be invoiced in the search boxes then click '**Apply'** or press '**Enter'**. You can also invoice per department, per program or per student type i.e. GSSP or PSSP
3. The classes will be shown on the grid, if they do not, check section 2.4.10.1 above. Click on '**Invoice all in grid'** and fill in the amounts in each account vote-head and '**Save**.'

2.5 AUDIT TRAIL - SYSTEM LOG FILES

System log files show the major changes done to the data within the ERP. It records the following information

1. The name of the user who made the changes
2. The computer used to make the changes
3. Description of the changes made to the data
4. The date and time of when the changes were made

Log files can be searched while considering the dates when they were done, the description or the name of the user in question.

To search for a particular user's log files, enter the user's name as saved in the ERP (not the username) in the search field labelled personnel and click '**Apply'** or press '**Enter'** on the keyboard. This data is recorded automatically by the ERP therefore it cannot be edited or be input by a user.

3.0 STUDENT MANAGEMENT

Student management module has the following sub-modules or sections

1. Operations,
2. Attendance,
3. Documents, abbreviated as Docs
4. Setups and,
5. Miscellaneous

3.1 Setups

Doing the setups is necessary before using any other sections of the student module. Setups has the following areas and they are set up in the order listed;

3.1.1 Campus

To set up campuses, click on '**Campus'** then '**New'**, enter the campus details which include campus name, address, telephone and email. The 'notes' section is provided for any other details or additional information not captured. Click '**Save**' after all details are entered.

There are cases where a particular program is offered in more than one campus, for instance, if an institution has a campus in Nairobi and Mombasa, then it is advisable to create a campus called Nairobi/Mombasa to cater for the programmes offered in both these campuses.

To edit the information for a particular campus, double click on the name or click once then click '**Edit'**. Enter the correct information then click '**Save.**' To delete, click on the campus name then click '**Delete**.'

3.1.2 School

To setup the school names, click on '**School'** then click '**New.'** Enter the school details then click '**Save**.' Note that the school name must be provided. To edit the information for a particular school, double click on the name or click once then click '**Edit'**. Enter the correct information then click '**Save.**' To delete, click on the school name then click '**Delete**.'

3.1.3 Department

Departments covers all the sections within the institution. These include those that are tuition related and those that are not tuition related.

Tuition related departments are those that are directly linked to providing academic services specifically teaching or providing lectures, while those that are not tuition related are departments that are not concerned with providing lectures or teaching services to students e.g. Transport, Finance etc.

To create a new department, click on '**Department'** then '**New'**, enter the department name and other details as provided in the spaces. Mark the checkbox labelled '**tuition related department'** if the new department is tuition related, if not, leave the checkbox unmarked then click '**Save**.'

To edit the information for a particular department, double click on the name or click once then click '**Edit'**. Enter the correct information then click '**Save.**' To delete, click on the department name then click '**Delete**.' Note that in the list of departments under the column labelled '**Tuition'**, those departments that are tuition related have this column written as **True** wile those that are not, are written **False**.

3.1.4 Programmes

To setup the programme, click on '**Programmes'** then '**New'**, enter the programme code (should be unique and normally provided in the institution's programme list), type in the programme name, select the department from the drop down list (Note that only departments that were saved as tuition related will appear in the drop down list), select the grade type from the drop down list, select the final year of study from the drop down list, enter the maximum number of units to be registered per semester and the maximum units to be taken per academic year, type in descriptive notes, if any, then click on '**Save**.'

To edit the information for a particular programme, double click on the name or click once then click '**Edit'**. Enter the correct information then click '**Save.**' To delete, click on the programme name then click '**Delete**.'

3.1.5 Class status

The class/student status indicates the status of the class or a student. The status of a class can either be active, graduated, transferred, attachment, differed etc as determined by the school policies. To create a new status, click on class status then '**New'**, enter the status name, the descriptive notes then click '**Save**.'

To edit the information for a particular status, double click on the name or click once then click '**Edit'**. Enter the correct information then click '**Save.**' To delete, click on the status name then click '**Delete**.'

3.1.6 Class type

The class type or study mode, indicates the kind of students who will belong to a class. Common class types include full-time (regular), part time students, long distance learning students etc, as determined by the institution.

To setup the class types or study modes, click on '**Class types'** then '**New'**, enter the class type name, its descriptive notes then click on '**Save**.'

To edit the information for a particular study mode, double click on the name or click once then click '**Edit'**. Enter the correct information then click '**Save.**' To delete, click on the class type name then click '**Delete**.'

3.1.7 Class

A class shall consist of a number of students doing the same programme under the same study mode who entered at the same time or during the same intake period.

To create a new class, click on '**Class'** then click on '**New'**;

- Enter the class code. The class code should be unique and bear the programme code, the study mode, the month of intake and the year of intake, for example, if a new class for Bachelors of Science in Computer Science having a code of BSCS, for September intake 2019 for full time students is to be created then the class code should be BSCS/FT/S/19 where FT stands for Fulltime, S for September (the month for the intake) and 19 the year for the intake. This is subject to change, the institutions policies and their tradition of doing things.
- Enter the class name
- Select the programme from the drop-down list

- Select the campus from the drop-down list
- Select the start and end dates from the calendars. The start and end dates must be accurate to enable the finance sections invoice the classes and the students in the classes appropriately.
- Select the semester type as normal.
- Select the intake from list
- Select the mode of study
- Select the class status. For new classes, the class status is active. Later on, the class status can be updated to a different status, this is not done automatically by the system, however, if an 'end date' for a particular class has passed, the system will regard this class as an 'old class' and will not appear in the grid. Only active (ongoing) classes appear on the grid.
- Select the current year of study and current semester
- Write any descriptive notes then click on '**Save**.'

To edit the information for a particular class, double click on the name or click once then click '**Edit'**. Enter the correct information then click '**Save.**' To delete, click on the class name then click '**Delete**.'

NOTE: A class cannot be deleted if it has students registered to it. During deletion of such classes, the system will indicate a warning and the number of students in that class intended for deletion.

To view a list of all classes including old classes, ensure the checkbox labelled '**include old (inactive)**' is marked then click on '**Apply'** or press the '**Enter'** key on the keyboard.

A class can be filtered from the list using the class code, using the its programme, its department etc as provided in the search filters. Clicking on '**Print'** will display a print preview of the list of classes displayed on the grid with further options to export to an excel sheet, PDF or print directly to a connected printer.

3.1.8 Exam body

The exam body is the setup for creating the institutions associated with examination of students within the school. Common examination bodies include, KASNEB, KNEC, ICDL and the institutions name as an examiner for internal examinations.

To setup examination bodies, click on '**Exam bodies'** then '**New'**, enter the details of the examination body (institution) then click on '**Save'**.

To edit the information for a particular Exam body, double click on the name or click once then click '**Edit'**. Enter the correct information then click '**Save.**' To delete, click on the Exam body name then click '**Delete**.'

3.2 Miscellaneous

3.2.1 Setup

The setup includes the following under general

a) The album path settings for indicating the path from where the pictures of students will be saved and retrieved
b) Closing of academic records per class: To close the academic records of an entire class, enter the class whose records are to be closed then click on '**close academic**

records.' If one is unsure of the class, click on the hand lens icon to search for the class, double click the class or click once then click select to pull the class from the list then click '**Close academic records**.'

c) Closing of an academic year by clicking on the button labelled '**Close full academic year.'**

d) Synchronization of applicants (updates the records of applicants), deletion of approved applicants (deletes only approved applicants) and deletion of all applicants (deletes the whole list of all applicants)

e) Check box for '**Enable auto registration number generation'** to enable the system generate admission numbers automatically if marked

f) Checkbox for '**Allow editing registration'** numbers that allows admission numbers to be edited if marked

g) A section for **Registration number generation** that has checkboxes for
   - Generating admission numbers based on programme codes
   - Generating admission numbers based on class codes
   - And attaching the current year of admission to the admission number.

Setups has a '**Rules and regulations'** section for setting up the rules for the school.

After all the setup is done, click on '**Save**.'

3.2.2 Reports

The reports under student management is accessed by clicking on student management then **reports.** Reports under student management are listed below

Report name	Function	Associated search filter
Student list (Basic)	Displays a basic list of students based on search filter input	Class, student number, gender, stay, programme, department, class status, date
Student list	Displays a more detailed list of students based on search criterion used	Class, student number, gender, stay, programme, department, class status, date
Applicant list	Displays a list of applicants	Class, student number, gender, stay, programme, department, class status, date
Department list	Displays a list of departments	
Programme list	Displays a list of programmes offered in the school/institution	
List of classes	Displays a list of classes	programme, department, class status, date
Term/semester list	Displays a list of semesters/terms	
Class statistics	Displays a list of males, females, boarders and commuters per class	Class, student number, gender, stay, programme, department, class status, date
Class statistics (Reporting)	Displays a list of males, females, boarders and commuters per class for the students who have reported	Class, student number, gender, stay, programme, department, class status, date
Class list arrears	Displays the list of students' fee arrears based on the search criterion used.	Class, student number, gender, stay, programme, department, class status

The above reports are all accessed in a similar fashion. To access a report

1. Click on report in student management
2. Click once on the desired report, this highlights the report to blue.
3. At this stage, one can click on print, this will display the whole report without any search parameters used.
4. To narrow down on the report, after step two, select the search criteria for the report. Note: more than one search criteria can be selected for a single report.
5. Click on print to display the report.

Note that there are checkboxes for '**include old'** and '**include old classes'** in the interface for the reports. Whenever any of these is used, a report will display a list including those whose records have been closed or marked inactive.

3.3 Operation

Has the following three sections

3.3.1 Admission book

Admission book is used to do the following;

1. Admit new students
2. Check student records
3. Close academic records of individual students
4. Print student information according to the search criteria used
5. Print registration forms of students who are already admitted into the school

3.3.1.1 Admission of new students

Before a new student is admitted, ensure that the class for the student is set. The class determines the programme the student is taking. Check section 3.1.7 on how to create classes.

To add a new student's data, go to '**Admission book'** then click '**New**.' Student data can be entered with the admission number being auto-generated by the ERP or being entered manually. A new student can also be added from the applicant's list or if they were former students at the institution (this applies if the student is advancing their academics in the same institution, i.e. from Certificate to Diploma or Diploma to Degree or from Degree to Masters in which case they will be considered as new students in the course they are being admitted to).

1. **Admission of students with manual entry of admission numbers**
   After clicking '**New'**, notice that we have five tabs
   a) Personal data
   b) Academic/work background
   c) Miscellaneous abbreviated as Misc.
   d) Notes
   e) And academic profile

   By default, the **Personal data** tab is selected after the new button is clicked. Enter the data required under this section. Every label in blue indicates mandatory data. Note that the stay status must not be left blank.

   Some details like, study level, study status, study type, exam body, class and stay status exist as a drop down.

Once all the details in personal data is entered, enter the details in the adjacent tabs. The KCSE Grade is a mandatory field. After all the data is entered, click on '**Save**.'

The academic profile tab will be inactive when entering data of a new student.

2. **Admission of students using auto-generated admission numbers**
   To use the systems autogenerated admission numbers, ensure to **Enable auto-generation of admission numbers**, check section 3.2.1 (e).
   After the setup under the named section (3.2.1 (e)) is done, click on admission book, then new. Enter the details of the student while leaving the admission number blank. The admission number will be filled after the selection of the class and the study type.
   If the student is a GSSP student, the admission number will have a 1 attached to it while PSSP student will have a 2 attached to it e.g. BABS/0065/1/2019 and BABS/0067/2/2019. This helps distinguish between Government sponsored (GSSP) and privately sponsored (PSSP) students.
   Enter the rest of the details in the adjacent tabs then click on **Save**.
3. **Admission of student from the applicant list**
   - To admit a former student who is advancing to a higher programme, click on **Admission book,** click on '**New'.** In the **'Personal details'** tab**,** click on **'Create applicant from'** button, this will bring up the students/applicants list. Ensure that the '**All**' check box is checked. Search the student then double click or highlight the name then click '**select'** to transfer the details to the new student details interface. This will also import the previous admission number, delete to input the new admission number.
   - To admit a student who is present in the applicant list, click on **Admission book,** click on '**New'.** In the **'Personal details'** tab**,** click on **'Create applicant from'** button, this will bring up the students/applicants list. Ensure that the '**Applicants Only**' check box is checked. Search the student then double click or highlight the name then click '**select'** to transfer the details to the new student details interface. Add the details that were not captured while adding the applicant.

3.3.1.2 Checking students' records

To check the profile records of a student from the admission book, click on **'Admission book.'** A student can be searched by using a number of criteria including the admission number, name, class, gender etc as indicated in the search filter labels. These can also be combined, for example, one can search a student by name and class e.g. a student named Kamau belonging to DBA/S/19 class can be searched. After entering the search parameters, click on '**Apply'** or press the **Enter** key on the keyboard. Check on 3.3.1.4 on how to print the record displayed on the grid.

One can print/display the records of a particular group of students at once for example, those of a particular class by entering the class name then clicking on apply, those of a particular type i.e. government sponsored only by selecting GSSP from student type dropdown then clicking '**Apply'** etc.

3.3.1.3 Close academic records of individual students

To close the academic records of individual students,

- Open the admission book by clicking on admission book
- On the search filters, enter the admission number of the specific student whose academic records are to be closed. If the admission number is unknown, one can search by entering the name, class or the specific department of the student.

- After entering the search parameter(s), click on **Apply** or press **Enter** on the keyboard and observe the name(s) displayed on the grid.
- Double click on the name of interest or click once then click edit. Details of the student will be displayed.
- On the personal details tab at the bottom, mark the check box '**Close academic records'** then click on **Save.**

Note: For some students, the system may request you to provide the KCSE results when you click on save, this is because this is mandatory data and cannot be blank. Once the academic records are closed, the student will not appear on the grid unless '**Include old'** checkbox is marked.

To close the academic records of an entire class, check section 3.2.1 (b).

3.3.1.4 Print student information according to the search criteria used

To print student information;

- Click on admission book
- Enter the search parameter of interest, e.g. the name of the class, department, student type (GSSP, PSSP), county etc the press **Enter** on the keyboard or click **Apply.**
- A list will be displayed on the grid, click on **Print** to have a preview of the records when printed
- The preview will have an option to export to PDF or Excel sheet. This is provided in order to give the user more control over the document before actual printing.

3.3.1.5 Print registration forms of students who are already admitted into the school

- Open the admission book
- Enter the search parameter of the student(s) whose registration form is to be printed
- Click on '**Print Reg form'** button close to the '**Print**' button
- The details of the student(s) will be displayed on the registration form.

3.3.2 Applicant

An applicant is a prospective student or a student who is yet to be expected in school and has not been officially confirmed as a student in that particular institution.

To create an applicant:

- Click on applicant under student management
- Click on **New**. The interface for adding new applicants has tabs for personal details, academic background, miscellaneous and notes. Notes is for adding any other details that may have not been captured in other tabs.
- Add the details of the applicant. Note that a class called applicant should be created. The applicant class is for adding all the applicants when adding their details. Click on **Save** after all the details are added.
- An applicant can also be created from a list of older students whose records are already in the system. To add such an applicant, click on new, then click on create applicant from, this will show a grid with a list of students. Double click on the student of interest or click once then select to transfer the details of the student to the applicant interface, add any other details then click **Save**.

3.3.3 Student Reporting

Student reporting is used to keep record of the students who are present for the current ongoing semester. Records are taken at the time when the students are coming in to school after a break.

3.3.3.1 To report a student

- Click on student reporting under student management
- Click on **New** to report a student
- Enter the student's admission number then click **Go** button. If you are not sure of the student number, click on the hand lens icon then search for the student, double click the specific student or click once then click select to add the details of the student.
- Confirm that all the details displayed are correct, update the student's stay status then click **Save.**

3.3.3.2 To check the records of students who have reported

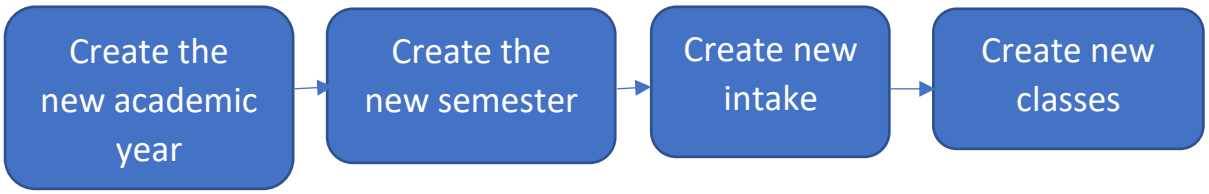
- Click on student reporting under student management
- On the grid, a list of students who have reported for the current semester will be displayed
- One can also check the students who have reported depending on the search criteria used i.e. one might check the students who have reported from a particular class, department, stay status (boarders or day scholars) etc
- You can also check those who reported between or after which particular dates by selecting the option in the drop down in dates then clicking on **Apply** or pressing **Enter** on the keyboard.
- Once the list is displayed, an option to print is also provided. To print, ensure the grid has a list of students then click on **print**.

This can also be accessed from the reports mentioned in section 3.2.2 above. The reports section offers more search filters for students who have reported for a particular semester.

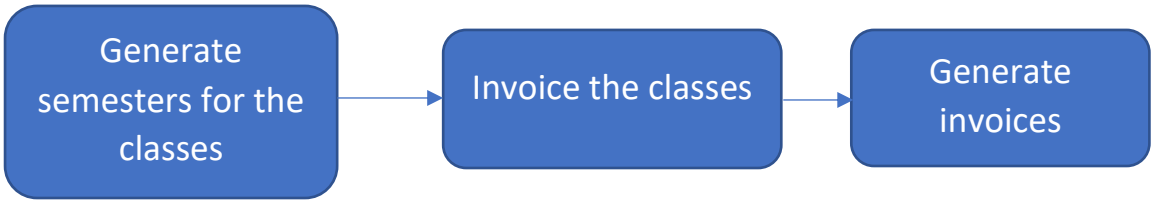
3.4 Activities flow map for reporting (continuing students) and new students in brief.

For new students

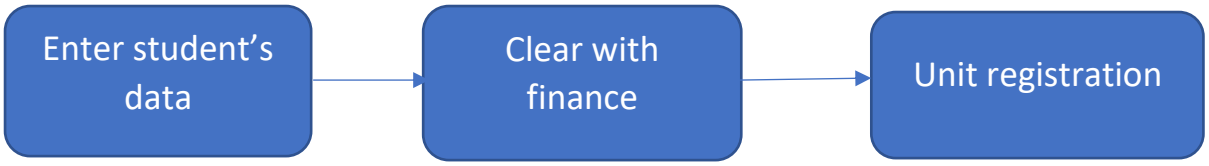
1. Registrar's/admissions office



2. Finance office

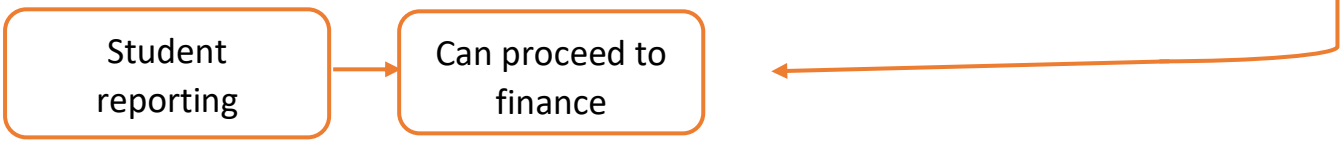


3. Admissions office



For continuing students

2. Admissions office



3.5 Shifting present students into newly created classes

There are instances when a class that contains a number of students needs to be deleted or closed/inactivated. However, a class containing students cannot be deleted. The only solution is to make sure that a new class with similar details but different codes is first created then shift the students one by one from the old class to the newly created class.

3.5.1 Reasons for this instance

1. The class code does not capture/represent the full details of the entire group of students
2. The class contains groups of different student types (part time day, part time evening and full-time students) doing the same course all admitted at the same time thus difficult to distinguish them.

If the only problem was that the class was wrongly coded, click on **class**, search the class, double click then edit to the right code. Click **save**, otherwise, follow the steps below.

3.5.2 Step 1: Create the new class

1. Click on **student management** then **class** under section for settings
2. Click on **new**. Type in the new class code and other details as prompted, for example, create class codes for BABS/PTD/M/16, BABS/PTE/M/16 and BABS/FT/M/16 which are for BABS part time day (PTD), BABS part time evening (PTE) and BABS full time (FT) respectively each attached with the month (M for May) and the year (16 for 2016) when the students were admitted into the school.
3. In the '**mode of study'** drop-down, ensure to select the appropriate corresponding one i.e. part time day for classes with the PTD code, part time evening for classes with the PTE code and regular students for the classes with the FT code. The modes of study may vary from one institution to the other.
4. Enter all the other class details then click on **save.** Be keen on the start and end dates for the classes.

Note: If the class created is to replace another class, make sure that the start and end dates are similar.

3.5.3 Step 2: Shift the students to the created classes

1. Click on **student management** then **admission book**. This will display an empty grid. Click on **apply** to populate the grid with the list of active students. To display including old students, mark the '**include old'** checkbox then click **apply** again.
2. To narrow down on the list, in the search filter labelled '**class'**, enter the code of the class that students need to be shifted from then click on **apply** or press **enter** on the keyboard.
3. Once the grid is populated, double click on the students one by one as you change/shift them to the right class then click **save** for each.

3.5.4 Step 3: Deleting the old classes

1. Go to **student management** then **class** under settings
2. Click once on the class to be deleted, this highlights the class to orange, then click on **delete**

Note: if the class still has students, the system will not delete the class. Go to step 2 above to ensure that all students are shifted from this class.

4.0 EXAMINATIONS

The examinations module serves the following purposes

1. Doing marks input through excel import or entering one by one
2. Creating of marksheets
3. Assignment of units to lecturers
4. Unit registration for students
5. Printing of student transcripts
6. Accessing reports related to examinations module
7. And a setup section of the module

4.1 Examination settings

Before any operations are handled in the examination module, it is important too have settings done. To do this, click on Examinations tab then '**Exam setup'** (the second item from the right). This has the following tabs

4.1.1 General

4.1.1.1 Global mark computation

Has provision for assigning the marks for continuous assessment tests (CATS) and Examinations. Also provides dates for marks input to prevent unauthorised input of examination marks.

4.1.1.2 Computation settings

This has provisions for setting the percentage of units that if failed, a student sits for a supplementary, shall repeat the year or shall be discontinued.

4.1.1.3 Final year Transcript recommendation

Has a space to add the information that should be displayed on the final year Transcript.

Other settings under general include a check box for whether to use and show the Grade Point Average (GPA) and **synchronization** of subjects: this syncs subjects in accordance to the semester they are taken and the students who have taken them majorly to enable marks input. When the synchronize subject button is pressed and the processed is confirm to take place, wait for the system to complete the synchronization process before accessing other functions. For a faster process, it is advisable to do synchronization from the server computer rather than a remote computer.

Note: Once all setup is done under general and every other tab, one should always save the changes by clicking on **Save** button. In case one is unsure of the changes made, click on **Exit**, this will not save any changes made.

4.1.2 Report Configs

Provides space to edit/alter/control the information on the transcript's footer and other messages on the same Transcripts and examination slip. Has three tabs

4.1.2.1 Academic/Progress report

Has a space for writing the message on the academic report transcript, this could be messages like the signatories etc.

Has an option to show additional footer as a check box and whether it should be at the centre, left or right side. After checking the box and setting the position, indicate the footer heading and details.

4.1.2.2 Transcript

Has a space for writing the message on the academic report transcript, this could be messages like the signatories etc similar to the progress report.

One additional space is for writing the message on a student transcript who has failed.

Has an option to show additional footer as a check box and whether it should be at the centre, left or right side. After checking the box and setting the position, indicate the footer heading and details.

4.1.2.3 Examination slip

Has space for writing the message on the examination slip.

4.1.3 Course allocation

This has message that shall be on the course allocation document to be given to lecturers. The space has provision for writing the letter body and the letter footer that may have salutation.

4.2 Other examinations settings

The examinations settings should be done in the following order

4.2.1 Setting up Mark type

The mark type indicates the kind of examinations that the institution gives the students, for example, a final examination, sit in CATs (continuous assessment tests) that may be CAT 1, CAT 2 and CAT 3 etc that are all recorded by the ERP. By default, the ERP has Exam and CAT. To create a new Mark type, Click on **Mark type** then **New**, type the name of the mark type, add any descriptive notes then click on **Save**.

4.2.2 Setting up Subject type

Subject type indicates the categories of the subjects, for example, science related subjects, finance related subjects thus subject types can be science and Finance respectively. To set up the subject type;

- click on **Subject type**
- Click on **New**
- Type in the subject-type name
- Add any descriptive notes then click **Save**. Note that there is a check box for **closed/inactive**, this is to be checked if the subject type is no longer used rather than deleting it.
- To check if a subject type already exists, click on subject type then check the grid
- To edit a subject type, after the subject types are shown on the grid, double click on the subject type, make the changes then click **save** or alternatively, click on the subject type from the list then click **edit** button, make the changes then **save**.

4.2.3 Setting up Subject sub type

The subject subtype further categorises the subjects, for instance, we have science as a category then under science we can have Physics, Biology, Geology, Chemistry etc. To create a new sub type;

- click on **Sub type**
- Click on **New**
- Type in the sub-type name
- Add any descriptive notes then click **Save**. Note that there is a check box for **closed/inactive**, this is to be checked if the subject sub type is no longer used rather than deleting it.
- To check if a subject sub type already exists, click on sub type then check the grid

- To edit a subject sub type, after the subject sub types are shown on the grid, double click on the subject sub type, make the changes then click **save** or alternatively, click on the subject sub type from the list then click **edit** button, make the changes then **save**.

4.2.4 Subject setup

Subject setup is for creating the list of units/subjects taught at the institution. To add a new subject;

- Click on subject setup
- Click on new
- Enter the code of the subject. Note: the code should be unique to one particular unit/subject
- Type in the name of the subject
- Select the department, from the drop-down list, that offers this unit/subject. See how to set/add departments at section 3.1.3
- From the drop-down list, select the subject type and subject sub type.
- Type in the credit hours and credit units of the subject. This is important for GPA (Grade Point Average) calculation.
- Add any descriptive notes then click on **Save. Note:** there is a checkbox indicated **closed/inactive**, this is checked when the subject/unit is no longer offered.
- To check if a subject or unit exists, click on subject setup, the grid will show the subjects currently offered. Marking the checkbox indicated **include old**, will populate the grid with subjects that have been closed/marked inactive. Type in the name of the subject or code in the search fields then click **apply** or press **enter** on the keyboard to see the subject being searched for.

4.2.5 Setting up Overall point grading

This is used to set the numerical value (NV) points for the GPA computation. It indicates the overall points and grades for the students. To set up the overall Point Grading

- Click on Overall point grading
- Click on New, select type from the drop down. The type drop-down has undergraduate, certificate, diploma and certificates as choices.
- Fill in the points range, grade letter, grade name, grade comment, points (NV) and descriptive notes for the grade created then click on **Save.**
- to edit a grade, select the grade from the grid the click on edit or simply double click, make the changes then **save.**

The ERP uses the formula **GPA** = $\frac{total\ amount\ of\ grade\ points\ earned}{credit\ hours\ attempted}$

4.2.6 Setting up Award grading

This is majorly used to set up the GPA points for general computation. It is also used to setup the award names and ranges for the same awards. To set up award grading;

- Click on award grading
- Click on **new**, then select the type from the drop-down list. The type drop-down has undergraduate, certificate, diploma and certificates as choices.
- Fill in the points range, the award name and the GPA points range
- Add descriptive notes for the award name then click on save
- to edit a grade, select the grade from the grid the click on edit or simply double click, make the changes then **save.**

4.2.7 Setting up Unique symbols

Unique symbols are used on the transcript in place of areas where marks are not indicated due to certain reasons such as missing marks, supplementary, marking in progress etc and are normally marked as symbols such as MM, *, IP for the aforementioned respectively. To create a new symbol;

- Click on unique symbols
- Click on **new**, select the name from the drop-down list
- Type in the symbol
- Add any descriptive notes
- Click on **save**
- To edit a unique symbol, double click on the symbol from the list, make changes then **save**.
- To delete, select the symbol then click on **delete**.

4.3 Curriculum setups

Curriculum setup is done per program and enables the student to register for units in accordance to the program they are pursuing for a particular semester. To do curriculum setup;

- Click on curriculum setup
- Click on new, select the programme by its code from the drop-down list. Once the programme is selected, its full name will be displayed adjacent to the code.
- There are three tabs for Core, Elective and Optional which indicate the list of subjects that are mandatory, those that must be selected and those that are optional respectively.
- In the core tab, indicate the minimum number of units to be taken and the minimum credit units, do the same for elective and optional, click **save and continue** at the bottom of the interface. Note: clicking on **save and continue** activates the orange (-) and green (+) buttons on the rights side of the interface which are used to remove added subjects and add subjects respectively.
- Select a tab under which subjects are to be added i.e. Core, Optional or Elective. Click on the green (+) button to add subjects. This brings up another interface. Select the year and semester from the drop-down. These indicate the year and semester when that particular course is to be taken.
- Select the subject from the drop-down. For ease of selection, one can type the code of the subject in the drop-down text-field, this will display the codes that begin by the letter typed. The name of the selected unit/subject will be displayed under the code.
- Add any additional notes then click **save**
- After adding all the subjects, click on **save** in the curriculum setting interface.
- To remove a subject from the list, first select the tab under which the subject belongs i.e. Core, Optional or Elective, click on the subject of interest then click the orange (-) button.

4.4 Unit registration

Unit registration is used to record the units taken by a student for a particular semester in a particular academic year. Its importance comes in when accessing the unit registration reports and examination when doing marks input. It is therefore important to ensure that all students taking a particular course have registered for that unit. To do unit registration for a student;

- Click on unit registration

- Click on **New**, type in the student's admission number then press **Enter** key to display the name or click on the hand lens icon then search for the student then double click or highlight then select.
- Select the semester from the drop-down then click on **save and continue.** Note that clicking on save and continue activates the orange (-) button and the green (+) button.
- Click the green (+) button to add the units taken by the student. Clicking the green button opens an interface that allows for selection of units. Type the code of the unit in the drop-down text field then add any descriptive notes then click **save. Note** that the code of the subject is very important when selecting the units
- to remove a unit from the list of units a student is taking, select the unit from the list then click on the orange (-) button.
- Once all the units registered by a particular student are added, click on **save** in the unit/subject student registration interface. Check section 4.8.1 on unit registration report.

4.5 Lecturer unit settings

Lecturer unit settings is used to assign the lecturer the subjects/units they shall teach/lecture in a particular semester in a specific academic year. It is also used to print course allocation forms for the selected lecturers. A course allocation form contains the units/subjects assigned to a specific lecturer. Check section 6.4.2 (Staff register) on how to add lecturers into the system.

4.5.1 Assigning units/subjects to lecturers

- Click on lecturer units' item
- Click on new to assign/allocate a lecturer some subject(s)
- On the next interface, enter the lecturer's number then press on Enter or click on the hand lens icon then double click on the lecturer to allocate units to, alternatively, after clicking the hand lens icon, search for the lecturer by name or other search criteria provided, click on the lecturer then click on select.
- Once the lecturer's number and name are displayed, choose the semester from the drop-down then click on **save and continue. Note** that this activates the green (+) button and the orange (-) button.
- Add the units allocated to the lecturer by clicking on the green button. Type in the full class code or select from the class drop-down.
- Enter the subject code. Typing the first letter of the subject code will show all subject codes beginning with the given letter. Typing in the full subject code then pressing **Enter** on the keyboard displays the name of the subject. Add any descriptive notes then click on **save**.
- To remove a subject from the list of subjects allocated to a lecturer, click on the subject then click on the orange (-) button.
- After the list is complete, click on **save**

4.5.2 Printing the course allocation form

The course allocation form displays the units allocated to a particular lecturer. To access this form;

Click on lecturer unit

This displays a list of lecturers on the grid. Click once on the lecturer whose form is to be printed then click on print course allocation. Note: the letter body and salutation are dynamic contents that can be changed and pre-set. To add, alter or change the letter body and salutation of the course allocation form see section 4.1.3.

4.6 Marks input

Marks input can be done in two ways

1. through excel import that is also useful for marks backlog
2. or through entering marks one by one

4.6.1 Uploading exam results into ERP through excel sheets import

Step 1: Subject setup

Under **Subject Setup**, check if the unit exists in the ERP, if not, add the unit correctly by adding its code, the correct name, category, department, contact hours and the credit hours.

Step 2: Excel sheet preparation

Prepare the excel sheets for each unit in the format below

Member ID	Mark

Table 1.

The **Member ID** is the student's admission number while the **Mark** is the score for that particular unit

Step 3: importing the data in the excel sheet.

1. Go to **Marks Input** (this is the first item under the examination module) and select **Excel Import**
2. **Browse** the excel sheet that is to be added
3. Enter the correct **Sheet Name** then click **Populate Excel Data** to ensure that the sheet selected has the correct data.
4. Data that is to be imported will be displayed showing the number of records found
5. In the text field labelled **Mark**, write Mark
6. In the case where marks for previous semesters are being imported, select the check box labelled **Backlog Marks**, then select the relevant year and level from the drop downs
7. Select the **Exam type** and the **Semester** for which the scores are being uploaded
8. Select the **Subject**
9. Select the check box indicated **Ignore Student Unit Registration**.
   NB: ignore student unit registration is only selected when the marks being imported are for semesters where the students' unit registration data was not captured. If there should be strict adherence to unit registration, then this option should be left unchecked.
10. Click on **validate fields**
11. Click on **Process** and then confirm by clicking **Yes** button.

Step 4: Data not imported

If any data has not been imported into the ERP, click on export to excel to save the data not imported for further confirmation or processing. Note: reasons why data may not have been imported into ERP

1. Missing mark in the excel sheets
2. Student admission number is non-existent in the ERP

Step 5: Process exams

When all is done, click on **Close,** then next to **Marks input** item, click on **Process exams** and wait for the process to complete.

4.6.2 Entering marks one by one

Before entering marks one by one ensure that the subjects are synchronized by following instructions in section 4.1.1.3. After the synchronization process is complete, proceed to Marks input. Follow the following steps in marks input

1. enter the class of the students whose marks are to be input or simply select from the drop-down list.
2. Select the subject code from the list whose marks are to be recorded. Typing the code will show the subject codes whose letter begin with the letter typed.
3. Select the semester then click on apply. **Note:** these three steps must be performed accurately in order to have the right data in the ERP. Before any data input is commenced, ensure that the information in the search parameters is correct. Only students who registered for the subject/unit selected will appear on the grid once the apply button is clicked. See section 4.4 on how to do student unit registration.
4. Enter the marks in the spaces provided. Once the marks are input, it is automatically saved in the system.
5. Preview the data by clicking the preview/print button. This is an optional step.

4.6.3 Creating a marksheet

A marksheet is a list containing the students' admission numbers and a space for filling in the marks. One can access such a list in a number of ways

1. obtaining the list from the student management, exporting to excel sheets and formatting the sheet in the required manner
2. obtaining the list from the exam reports under unit registration, exporting the data to excel sheet then formatting in the required format. Accessing reports shall be discussed in section 4.8 (exam reports)

4.7 Student reports

Student reports are categorised into progressive transcripts and academic/final transcripts.

4.7.1 To access progressive transcripts;

1. Click on **student reports**
2. Select the semester under which the report is to be printed
3. Click on **apply** to populate the grid. Note that the list shall contain students from different classes
4. To further narrow down the list, enter the name of the class of interest then click on **apply** again.
5. If only a particular student's report is required, enter the admission number and semester then click on **apply**.
6. When the data displayed on the grid is satisfactory, click on print report slip. Clicking on print grid will display a list of students displayed on the grid, just as a list.

4.7.2 To access an academic transcript,

1. click on student report then click on academic transcript.
2. Select the academic year and the year of study then click apply

3. To narrow down the list, in addition to the above, enter the search parameters then click on apply
4. Click on print to display the report.

4.8 Examination reports

In the examination module, the reports are accessed by clicking on the '**other reports'** tab on the far right.

There are two kinds of reports that can be accessed from this

1. Unit registration
2. Student list

The above reports are both categorised under the general tab

4.8.1 Unit registration

This is a report that shows the list of students who have registered for a particular course in a given semester for a particular academic year. the report has the following details

1. Name of student
2. The student's admission numbers
3. The student's class
4. The name of the lecturer
5. The name of the course/unit/subject
6. A place for the signatories

To access this report, follow the following steps

1. Click on '**other reports.'**
2. Click once on the **unit registration report,** this highlights it to blue.
3. Select the subject from the drop-down list. Note: from this stage you can click on print to display the document. In order to also have the name of the lecturer on the unit registration report, first ensure that the lecturer was allocated the subject/unit whose unit registration report is to be printed, see section 4.5.1 on how to allocate units to lecturers. If this is done proceed to step four.
4. On the drop-down labelled lecturer, select the lecturer from the list then click **print** to display the print preview of the document
5. It is important to note that the system automatically selects the current semester, for other semesters' unit registration, select the semester name from the semester drop-down before clicking on print.
6. Other filters available can be used to narrow down the list even further e.g. by class, by class type, by student number etc.

This report can be also used to create the marksheet list per subject when exported to excel sheets and formatting in accordance to the columns required.

4.8.2 Student list

1. To access the student list, click on **other reports**
2. Click once on student list, it is highlighted in blue after clicking
3. At this stage, clicking on **print** will display a list of all active students regardless of the class or program.

4. To narrow down the list to a specific class, after step two, select the class whose list is desired then click **print**. Other search filters are also available to help narrow down the list further.

5.0 FINANCE

The finance module is the largest and most robust module in the ERP taking data from almost every section of the ERP. Finance setup begins at the system administration (check section on 2.4 on finance setups) which includes settings that must be done before the Finance module can be used. It is concerned with the following tasks

1. student receipting and invoicing
2. customer receipting and invoicing
3. preparation of other forms of receipts and invoices
4. checking student arrears
5. preparation of journal vouchers (JV)
6. preparation of supplier invoices and payment vouchers
7. imprest management
8. budget management
9. financial year creation and
10. finance reports

5.1 Finance settings

The finance module also has its own settings in addition to the settings under the system administration. These settings are important prior to any student receipting or any other activities/functions in the finance module. To do settings in finance module;

- Click on the finance settings
- The finance setting has four sections
    1. General
       This has settings for;
        - the message on the student receipt, for example, fees once paid is not refundable etc
        - Checkboxes for fiscal year comparison
        - PV (payment voucher) numbering series
        - Imprest format selection i.e. either format 1 or format 2
        - Budgetary, that is, either to display GL balance on the documents
        - And PV footer format selection i.e. either format 1 or format 2
    2. Student finance configs
        - Consists of settings for
        - Message on the fee statement
        - Checkbox to allow auto-invoice once a new student is added.
        - Settings for fee policy
        - Button to assist in re-breakdown of receipt amounts
    3. GL account configs
        - This has settings for the accounts to be used for specific accounts e.g. Boarding account that are used for the purposes of the trial balances and student receipting. These configurations are necessary before any receipting is done. Once all the configurations are done ensure the **Save** button is clicked.
    4. And Miscellaneous abbreviated as 'Misc.'
        - This has buttons for populating the GL balances, recomputing the GL balances and closing the fiscal year. These actions are taken when the books

of final accounts are to be prepared or when the balances in the accounts have not yet recorded new transactions.

5.2 Student invoicing and receipting

Students can be invoiced in two ways either as a group (in a class) or individually

5.2.1 Invoicing a class

1. Ensure the class is created under **student management**.
2. Go to **system administration** and ensure that the semester for which the students are to be invoiced is created.
3. Go to **fee setup** under system administration and generate semesters. This adds the newly created semester for both GSSP and PSSP students in all classes.
4. Add the invoices for the classes either one by one or invoice as a group/invoice all in grid.
5. Go to **Finance module** under student invoices and generate invoices. On the Auto invoice interface, let the class and student number read '[Not specified]' then click on 'generate' and let the process complete. This adds/invoices the amounts added above (No. 4) to all students who belong to the invoiced classes.

5.2.2 Invoicing one student

1. Go to finance module under student invoices and generate invoices (generate invoices if they were not earlier generated).
2. Select the **semester** and enter the student number then click apply or tap enter button.
3. If student doesn't show, ensure that they are in the **right class** and that the class is an **active class** (check section 3.1.7 for guidance on classes). Also ensure that the student's **stay status is updated** (check section 3.3.1.2 for how to access student records) to either boarder or commuter.
4. When the student is shown on the grid, double click and fill in the amounts for affected vote heads and **save.**
5. These steps can also be used if the student was wrongfully invoiced.

5.2.3 Student receipting

1. To receipt a student, click on the Receipt book
2. Ensure that the student radio button is checked
3. Type in the student number and press **enter** on the keyboard or click on the hand lens icon and search the student from the list and select.
4. Enter the amount
5. Select the affected ledger i.e. the bank through which the payment has been made
6. The payment mode will auto-fill depending on the payment ledger selected
7. Type in the transaction reference (TRX), this is obtained form the receipt the students comes with as a proof of payment to the bank.
8. Confirm all the details are correct, then print receipt. This button also automatically saves the receipt
9. If the receipt is not needed as print document, once all the details have been confirmed, click on **Save**.
10. Note that the receipt number is automatically added by the system and cannot be altered.
11. To search and print the receipt of a particular student, in the receipt book, mark the radio button labelled **students receipts only**, select the dates within which the receipt was created, enter the name, registration number or class of the student and press enter or click on **apply**. The receipt will be displayed, click on the receipt then click **print**.

5.3 Customer receipting and invoicing

5.3.1 Customer invoicing

1. Click on customer invoicing
2. Select the customer reference by clicking on the hand lens icon, click on the name then click select or double click on the customer to add the refence to the invoice. This displays the name and the code.
3. Select the affected GL account from the drop-down list
4. Mark the proforma invoice check box if the invoice is a proforma invoice
5. Type in the quantity, description, unit cost and total amount of the items
6. To remove an item in the list, click on it then click on '**delete highlighted**.'
7. Add descriptive notes then click **print invoice** if an invoice document is requested or click on **save.**

5.3.2 Customer receipting

1. Click on receipt book
2. Click on **new**. Ensure the radio button labelled **customer** is marked.
3. Click on the button with the hand lens and search for the customer to be receipted.
4. Select the affected account from the drop-down list
5. Enter the amount in figures
6. Select the affected ledger
7. Type in the transaction reference (TRX)
8. Type in any descriptive notes then click on **save,** or click on **print** if the receipt is needed in document form.

5.4 Other receipts

Categorised into two

5.4.1 Receipts offered for other services/goods offered by the institution

- Click on receipt book
- Click on new. Ensure the radio button labelled other is marked.
- Enter the names of the party being receipted
- Select the affected accounts from the drop-down list
- Select the affected ledger
- Enter the amount
- Enter the transaction reference.
- Confirm that all the details are correct then click on p**rint** if the receipt is needed otherwise, click on **save**.

5.4.2 Sponsorship receipts

Sponsorship receipts follow the steps listed below

Ensure the accounts and ledgers for the sponsorship receipts are created. Check on section 2.4.6 on accounts setup. After this is done;

5.4.2.1 Receipt the sponsorship income

- Go to receipt book
- Click on new. Ensure that the radio button labelled other is marked
- Enter the names of the party being receipted i.e. HELB, CDF etc
- Select the affected accounts from the drop-down list

- Select the affected ledger, in this case, the ledger account into which the money was deposited
- Enter the amount
- Enter the transaction reference indicated on the sponsorship receipt or cheque number
- Confirm that all the details are correct then click on p**rint** if the receipt is needed otherwise, click on **save**. These indicate the first stage of handling the sponsorship receipt. Go to 5.4.2.2 for preceding steps

5.4.2.2 Add the list of the students who have been paid for by the receipt to apportion the income

1. To create a list, open the excel sheet and add the following columns in precisely the given format

Member Id	Name	Amount	Transaction ref	Date	ID number

2. Add the details as received from the sponsorship list while leaving the date blank. The date is to be selected when uploading the excel sheet. The ID number details is not necessary, if the ID number is absent, leave the details blank. After the excel sheet is created save in a location that is easy traceable.
3. Click on the receipt book
4. Click on excel register import
5. Click on **browse** to select the excel sheet from the location saved, enter the correct sheet name of the excel sheet then click on **populate excel data.** This fills the grid with the excel sheet data for your confirmation.
6. Click on the sponsorship checkbox then select the correct date. By default, the current date is selected.
7. In the ledger drop-down, select the one that corresponds to the sponsor
8. If there is strict adherence to the ID number, mark the checkbox named ID number validation
9. Select the sponsor name from the search icon
10. Select the corresponding parent receipt from the search icon
11. Click on **validate fields** to help check if all fields are correctly named and if data is correctly set in the columns
12. Ensure that the details in every field is correct then click on **process** to add the data into the ERP
13. If some students were left out, go to receipt book, click on new and click on **Find unidentified sponsorships.** Locate the student and receipt manually from the while selecting the same ledger as the one which was selected when the excel sheet was being uploaded.

5.5 Student arrears

Student arrears show the details of students' payments and any pending payments.

1. To access the student's arrears, click on '**students' arrears'** then enter a search criterion such as the admission number, the name, type (GSSP or PSSP), then click on apply or press the enter key on the keyboard.
2. To display pending arrears for all the students, in the registration number search area, type % as a wildcard then click **apply** and wait for the system to finish processing

3. To print a statement for a particular student, click on the student on the grid then click on generate statement
4. To access a general report based on the search criterion entered, after the system has finished processing, click on **print grid.** This produces a general report without the breakdown of the payments.
5. The student arrears interface also has a button for accessing the exam cards. Click on generate exam cards, enter a search criterion then click on generate exam card

5.6 Journal vouchers

A journal voucher is used to correct transactions recorded in wrong books or used to transfer funds from one account to another. To access the journal voucher,

1. Click on Journal vouchers
2. The voucher has the debit and credit sections. For purposes of easier transactions, a transfer account should be created to ease transfer of funds from one account to another.
3. On the debit, select the ledger for account transfer. The same account will be displayed in credit side
4. Select the account and department
5. Select the account on the credit side
6. Enter the amount and references
7. Add descriptive notes then click on **save**

5.7 Supplier invoices and payment vouchers

This is done in stages

1. preparation of the vendor invoices
    - click on vendor invoices
    - click on new
    - type in the LPO number
    - select the supplier code from the hand lens icon
    - enter the invoice number
    - select the affected ledger
    - click on the green (+) button and select the GL account and amount
    - add any descriptive notes then click on **save**
2. preparation of the payment vouchers
    - click on payment vouchers
    - click on new
    - select the ledger affected
    - under vendor details, click on the hand lens icon then click on apply to display the list of vendors. Double click on the vendor to add details to the voucher.
    - Click on add invoices button and select the invoices that the voucher is to be prepared for
    - Select the payment voucher account by clicking on the green (+) button
    - Add descriptions for the voucher
    - Enter the cheque number
    - Enter any descriptive notes then click on save or otherwise print if a document is required.

3. posting of the payment vouchers
   After the payment vouchers are created, they are posted.
   - Click on voucher posting
   - Click on new
   - Select the PV number from the list, confirm the details then click save.

5.8 Imprest management

Imprest is a form of petty cash management

4. To create a new imprest, select imprest management then new
5. Fill in the details as required in the imprest then click on save and print imprest where a copy is given to the applicant to sign after which it goes for approval.
6. Imprest surrender
   - Select imprest surrender
   - Click on new
   - Select the payee from the list. Select the imprest to be surrendered then click on save.
   - Note: imprest should have their vouchers created before surrender.

5.9 Budgeting

Ensure that the financial year for the budget is created, check section 2.4.5 on fiscal year setups or set up under budget periods

- Click on budget management
- Double click on the fiscal year name. this brings up the list with all the accounts that are to be budgeted for.
- Add the amounts for the accounts displayed then click **save**

5.10 Finance reports

Finance reports are categorized into three in the ERP

1. General
2. Final accounts
3. Quarterly reports
   Each category having several books of accounts/reports in them

To access the finance reports, go to **Finance** module then click on **Finance reports.**

5.10.1 The finance reports interface description

The reports

The upper half of the finance reports interface lists the different documents depending on the category selected. More reports are revealed as you scroll down using the slider to the right.

To get a particular report, just select on it (*example, student statement*) then select the different filters based on the selected report (*example, student number or, class, or gender, or programme, or department or may be a combination of these like gender – female then programme - Bachelor in Biblical Studies*) and click **Print**.

5.10.2 The search fields

The search fields (*also known as filters*) help the user narrow down the kind of report required based on the dates, the ledger, account, payment mode, system user etc. the book of account can be

filtered based on student number, gender, programme, fiscal year, expenses, class type, class status, payment mode, account etc as shown in the interface depending on the report selected.

5.10.3 Dates text fields

The first text field has a drop down having;

All – this prints a report without a specific date. The whole report will be printed.

= this prints a report only for the specific date selected from the drop-down calendar

> this prints reports for dates that come after the selected date

< this choice prints report for dates lesser than the specified date in the drop-down calendar

>= this prints a report for the date selected and all other dates that come after this

<= this prints reports for the selected date and all other dates that came previously

< > this prints report for the dates that come after and before the selected date. The selected date will be left out

Between – this prints reports for transactions between the specified dates only

5.10.4 Category 1: General

This has the following reports

No.	Report	Purpose
1	**Student statement**	Shows statements for eiher a particular student or a group of students
2	**Summarized student statement**	Shows a summarised report of the students statements
3	**Basic student list**	Shows a list of all the students or a list of students based on the filters input
4	**Summarized income**	Shows a summary of the incomes
5	**Detailed expenses listing**	Shows a list of expenses incurred
6	**Cash return**	Shows cash returns: helps evaluate from income producing assets
7	**Daily receipts analysis**	Shows receipts for the present date
8	**Supplier balances**	Shows suppliers/vendors balances
9	**Customer balances**	Shows the customers balances
10	**Closing balances**	Shows closing balances for the accounts listed in the ledger
11	**Imprest warrant listing**	Shows a list of all imprests
12	**Surrendered imprest listing**	Shows a list of only surrendered imprests
13	**Unsurrendered imprest listing**	Shows a list of only unsurrenered imprests

To access one of the reports above, select the report then check on the **active** filters

Example, to access the summarized income report:

- On the list of reports under general, select summarized report
- Selecting this will activate the l**edger** filter (is a drop down text field), the **payment mode** filter and the **accounts** filter. All the i**nactive** filters will appear lighter than the active filters
- Then click **print**

5.10.5 Category 2: Final accounts

This has the following financial books

No	Report
1	**Income expenditure**
2	**Statement of financial performance**
3	**Statement of budget comparison**
4	**Trial balance**
5	**General ledger listing**
6	**Cashbook**
7	**Statement of financial position**
8	**Statement of cash flow**
9	**Statement of changes in equity**
10	**Notes to the financial statement**

To access a report under final accounts, example, the trial balance

- Select the **final accounts**
- Select the **trial balance**
- Select the **date**
- Click on **print**

The same procedure applies to other reports.

Note: Different filters apply to different reports and will be active if the filter is relevant to the selected report.

5.10.6 Category 3: Quarterly reports

This contains a set of financial reports issued every three months

- Quarterly statement of financial performance
- Quarterly statement of financial position
- Quarterly statement of cash flow
- Quarterly notes to the financial statement

6.0 HUMAN RESOURCE

6.1 Introduction

The human resource module functions to add employees, manage employee information and handle payroll Employees added to the system include the lecturers and other staff of the institution. The modules are arranged in the order of set up.

6.2 System Modules

The system has **six** sub-modules:

1. System Administration
2. Personnel Management
3. Employee Portfolio
4. Payroll Management
5. Time and Attendance
6. Leave Management

6.3 System Administration Set up

Here you can

1. Manage users- **steps**
    - Click **New** button
    - Fill in the user code, full name password and all the prompted details
    - Assign rights by clicking the check boxes
    - **Save**
2. Change Password
3. View System Log and
4. Do the main set up - type in organization name, short name, physical location and address/ contacts and **hit** the **Save and Exit** button

6.4 Personnel Management

This module has general set ups and the main operation which is staff register.

6.4.1 General Settings

1. Project- This is the organization that the system runs. Click **New**, add Project **name** and other notes then hit the **Save** button. You good to go to next set up.
2. Branch – Same process as above, add name and choose the project which the branch is under and save
3. Departments- add the departments by clicking New and typing in the department name and then Save
4. Job Titles- In the organization, add all the titles of the staff members and their job descriptions and save. Example Driver, Engineer as such.
5. Employee Categories – Can be Administration, Non-Staff. Add the categories here.
6. Job categories- include casual, contract, part time, permanent
7. Add Countries, race and section.

6.4.2 Staff Register

Now it is time to **add the staff members**. Follow steps below:

1. Click Staff Register

2. Click New
3. Fill in the Main Details, Personal Info, Contact, Employment Details
4. You can attach necessary documents by uploading them
5. Add any information in the notes and save. Same procedure until you finish adding all the staff.

6.4.3 Personnel Management reports

Click HR reports in Personnel Management module. To **view** or **Print** the report, click on the report and click **Generate report**.

The reports include

1. Employee List
2. Employee list _Statutory Numbers (e.g. ID NO, KRA PIN, NSSF, NHIF)
3. Employee List- Bank accounts
4. Employee List- Not on Payroll
5. Employee List- Attendance Report

6.5 Employee Portfolio

It has the Main Portfolio and Operational Settings

In Main Portfolio, all employees are listed, you can click on any and **edit** the info such as add more **documents**, **reviews**, **trainings**, **experience** and **languages**

The **Operational Settings** include:

6.5.1 Employees review

- Click **New**
- Choose staff member, review type, rating, review date, reviewed by, next review date and comments.
- Hit **save** button.

6.5.2 Training Attended

- Click **New**
- Choose employee, enter course attended, period, begin date, end date, institution, cost, results, notes.
- Click **Save**.

6.5.3 Employees experience

- Click **New**
- Choose employee, company, period, start date, end date, designation, notes.
- **Save**.

6.5.4 Employee languages

- Click **New**
- Choose employee
- Language
- Mark the language if it is official, add notes if any and
- **save**

6.6 Payroll Management

This module has the following divisions

a) Payroll Setup
b) Payroll Operations
c) Main
d) Reports

We will expound on each in detailed steps

6.6.1 Payroll Setup

Set up the following

I. Banks
II. Financial institutions
III. Insurance providers
IV. Payroll accounts- like NSSF NHIF HELB BASIC SALARY
V. Job groups- click new, add name of job group and fill in payment scales
VI. Payment periods- these are automated, click new and save.
VII. Payroll status- added already
VIII. PAYE setup- included
IX. NHIF setup- added
X. Payroll settings – divided into
    - General – details to be filled:
      Employer PIN number, NHIF Code, NSSF number, Bank account number, retirement reminder settings and payslip message
    - Payroll Account -Link the accounts with the ones created in step (IV).
      Set up round off value and
      NSSF mandatory contribution (monthly- 200/-)
    - Payroll Settings-Insurance relief settings (%),
      Pension and NSSF- set Max allowable, read and tick the check boxes appropriately
      Add signatories' names on payroll instruction
      Check the information you want to be displayed on the payslip
      Save

6.6.2 Payroll Operations

Here, set up the following operations

6.6.2.1 Earnings:

1. Employee Earning
    - Click new
    - Choose employee
    - Choose type of earning e.g. basic salary or house allowance
    - Pick effective date
    - Save
    - Do that for all the employees
2. Group Earning- this is for those earning same amount
    - Click new
    - Choose earning type e.g. basic salary
    - Set effective date
    - Save
    - It sets the earning for all the employees whose pay scales are selected

3. One Time Earning- goes as its name (it is effective only once and no earning after the one earning)

- Click new
- Choose employee
- Choose date
- Set amount
- Has no end date coz it is one time
- Save

6.6.2.2 Deductions:

4. Group Deduction
    - Click new
    - Choose deduction
    - Set effective date and end date
    - Select financial institution e.g. HELB
    - Save
5. Employee Deduction
    - Click new
    - Choose employee
    - Fill in deduction details- type of deduction, value effective date
    - Fill in remittance details – financial institution and member number
    - save
6. One Time Deduction
    - Click new
    - Choose employee
    - Fill in deduction details- type of deduction, value, effective date
    - Fill in remittance details – financial institution and member number
    - save

6.6.2.3 Relief Insurance Cover

- click new
- choose employee, benefit name, provider, coverage, effective date, end date,
- for premium set employer and employee value
- enter policy numbers
- check appropriately (apply insurance relief, exclude from deduction)
- save

6.6.3 Main (Pay Profile)

- click new
- select employee
- select reason e.g. system capture
- fill main details-payroll status, effective date, end date, bank details
- fill statutory exemptions if any- check appropriately
- save

6.7 Payroll process

This is an important operation. To run payroll

1. click process salary
2. choose salary period
3. you can process for one employee – to do so choose employee and click process salary or’

4. after choosing salary period click process salary- this process the salaries for all the employees
5. you can view the salary slip here.

For other reports check section 6.8 below.

6.8 Human Resource Reports

Click on reports tab at the far right.

The payroll reports include

1. Salary Summary – choose period and click print
2. Salary Statement register(detailed)- choose Period and click print
3. Salary Statement register(summary)- ‘’’’
4. Payslips- choose period, employee and print or period and print for all employees
5. Payroll Instructions- select salary period and print
6. Advance RTGS Payroll Instructions- click print and follow labels to view and print
7. EFT Remittance Summary- select salary period and print
8. Check remittance summary
9. Cash remittance summary
10. Financial institution remittance
11. Benefit remittance
12. Other Deductions Remittance
13. Monthly income Tax returns
14. Monthly NHIF Returns
15. Monthly NSSF Returns
16. Monthly Pension
17. Loan/Advance Statement of Account

25. Pay Grade List
26. Annual Income Tax Returns (P9A)

6.9 Attendance Management

Set attendance type e.g. Absent

In Time attendance click New, pick employee, shift, project and time in and save

6.10 Leave Management

This module has

- Settings
- Leave operation
- Reports

7.0 ASSET MANAGEMENT

The asset management module is used for the following purposes

1. Keeping of asset register
2. Tracking of asset depreciation/appreciation
3. Calculation of asset depreciation
4. Tracking of asset issuance and return
5. Records of asset custodians

To access the asset management module, click on **Asset management** tab.

7.1 Asset management setups

Before any operations are carried out in the asset management module, do the following setups

7.1.1 Custodians

These are people/entities entrusted with a particular property/asset. To set up custodians;

1. Click on asset management then **Custodians**
2. Click on **New**. Enter all the prompted information. Note: Those marked with the red Asterix are mandatory fields. Information on Department and campus exist as drop-down lists for selection
3. Enter any descriptive notes then click on **Save**
4. To edit the same custodian information entered, double click on the custodian form the list in the grid or click once then click on **edit**, make the changes then click on **Save**.

Note that in the interface for adding custodian's information, there is a checkbox labelled **inactive/close**, this is used when the member is no longer a custodian. It is advisable to check this checkbox for a custodian instead of deleting their data.

7.1.2 Classification

This helps set up different classes of assets. To set up the different classes;

1. Click on asset management then **Classification**
2. Click on **New**. Enter the prompted information then click on save. The **inactive/close** checkbox is for the classes that are no longer used.
3. To edit the same classification, double click on the classification name on the grid or click once then click on **edit**, make the changes then click on **Save**.

7.1.3 Sub-class

The sub-class indicates the different categories of the assets. To set up the sub-class;

1. Click on asset management then Sub-class
2. Click on **New**. Enter the asset sub-class name and any descriptive notes then click on save. The **inactive/close** checkbox is for sub-classes that are no longer used.
3. To edit the same sub-class name and notes, double click on the sub-class name on the grid or click once then click on **edit**, make the changes then click on **Save**.

7.1.4 Location

The location marks the place where the asset/property is situated. To set up the locations;

1. Click on asset management then Location
2. Click on New. Enter the location name and any descriptive notes then click on **save.** The **inactive/close** checkbox is used for location that are not used any more.

3. To edit the same location entered, double click on the location name from the grid or click once then click edit, make the changes then click on **Save**.

7.1.5 Rooms

The rooms setups are for setting where the different assets are housed. To set up the rooms;

1. Click on asset management then **Rooms**
2. Click on **New**. Select the location of the room from the drop-down list, enter the name of the room then add any descriptive notes, click on **Save** once done. The **inactive/close** checkbox is used for rooms that are not used any more.
3. To edit the room details, double click on the room name from the grid or click once then click on **edit**, make the changes then click on **Save**.

7.2 Main operations under asset management

The main operations under asset management include the following

7.2.1 Asset register

The asset registry contains a list of all assets within that institution thus for each asset, it has the details of each specific asset. To add a new asset;

1. Click on asset management then click on **asset register**.
2. Click on **New**. The interface/window for adding a new asset has three tabs
   a. **Main details**
   Click on the main details tab. This has three subsections
   - Asset main details: add the information as prompted
   - Purchase details: add the purchase information as prompted
   - Description: Describe the asset being added.

   b. **Depreciation**
   This section will autofill with the depreciation details of the asses once the depreciation is calculated

   c. **Notes**
   Add any other details and notes on the asset being added.
3. Once all the details are added and confirmed, click on **save**

Note: there are three checkboxes in the window for adding a new asset
Fully depreciated: mark this checkbox when then asset is fully depreciated
Disposed: mark this checkbox when the asset is disposed through whichever means
Lost/Misplaced: mark this checkbox when the asset cannot be traced.

4. To edit the details of an asset, double click on the asset from the register or click once then click on **edit**, make the changes then click on **Save**.

7.2.2 Asset issue

Asset issue is used to track the person/entity to whom the asset has been given to as the custodians. To issue an asset

1. Click on asset management then Asset **issue**
2. Select the custodian from the list
3. Select the asset to be handed over from the list
4. Select the asset location and room from the drop-down lists.
5. Add more details if not captured from the prompts then click on **Save.**

6. To edit the details of the issue, double click on the asset on the grid or click once then click on **edit**, make the changes then click on **Save**.

7.2.3 Asset return

Is used to record the details of an asset that is being returned by the custodian. To make an asset return:

1. Click on asset management then asset return
2. Click on new.
3. Select the details as prompted then click on **Save**.
4. To edit the details of an asset return, double click on the name of the employee/custodian or click once then click **edit**. Make the changes then click **save**.

7.3 Assets setup and Reports

7.3.1 Assets setup

This has a window with a drop-down for the quarterly calculation of depreciation. It contains quarter 1 to quarter 4.

To run depreciation for a selected quarter;

1. Click on setup
2. Select the quarter of interest
3. Click n 'run depreciation for the selected quarter' and wait for the system to finish
4. Go to reports to view results

7.3.2 Reports

There are two kinds of reports

1. **Fixed assets movement schedule reports**
   To access this report, click on reports then click once on the Fixed asset movement schedule. This highlights it to blue. Then click on **print**. This gives the option of exporting to excel when Export to excel button is clicked.
2. **Quarterly fixed asset movement schedule report**
   To access this report, click on reports then click once on the Quarterly Fixed asset movement schedule. This highlights it to blue, select the quarter of interest from the drop-down list labelled Quarter, then click on **print**. This gives the option of exporting to excel when Export to excel button is clicked.

8.0 PROCUREMENT AND STORES

Procurement is a process of finding and agreeing to terms, and acquiring goods, services or works from an external source, often via a tendering or competitive bidding process. it generally involves making buying decisions under conditions of scarcity.
Before any functions are carried out in the procurement modules, several setups must be done as highlighted in the following sections.

8.1 Procurement setups

8.1.1 Settings

To access settings, click on **Procurement and stores** then **settings** at the far right. This is used to set the document codes for various documents such as the local purchase order, goods receiving note etc. the codes are attached to the documents' reference numbers. Set the codes for the documents as Prompted then click on **Save**.

8.1.2 Business entity

This comprise of the name(s) with which the institution uses while conducting businesses. To set up the business entity names;

1. Click on '**Procurement and stores'** then '**business entity.'**
2. Click on **New**. Enter the business entity code and name. on the business type, if the drop-down list is empty or does not have the needed choice, type in the business type. Enter the email, address and phone. Note that the telephone is a mandatory field.
3. Type in more details/notes then click on **Save.**
4. To edit, double click on the business entity from the list, make changes then click on **Save**.

Note: The **inactive/close** checkbox is used when the business entity name is no longer used. This is important if businesses have been previously conducted using the entity name. deleting is not recommended.

8.1.3 Campuses/Branches

Campuses/branches indicate the different locations of the same business entity. To add the campuses/branches;

1. Click on '**Procurement and stores'** then click on '**campuses/branches'**
2. Click on **New**. Select the business entity followed by the other prompted information.
3. On the **location** information, if the location is not in the drop-down list, type in the location in the space. If this is the default site (main site), mark the checkbox labelled **default site**.
4. Add more details then click on **Save**.

Note: The **inactive/close** checkbox is used when the branch/campus name is no longer used. This is important if businesses have been previously conducted using the branch/campus name. deleting is not recommended.

8.1.4 Inventory Manufacturers

These include the names of the manufacturers of the goods an services that the institution procures.

To add a new manufacturer;

1. Click on procurement and stores then click on Inventory manufacturers
2. Click on New. Enter the name of the company, add notes then click on **Save.**

8.1.5 Inventory tax

The inventory tax indicates the tax calculation for each product procured. It is captured in form of percentage. To add a new tax;

1. Click on **procurement and stores** then click on **inventory tax**
2. Click on New. Add the details prompted then click on save. The checkbox labelled (V.A.T) is used when the tax is also applicable on sales items

8.1.6 Inventory unit of measure

The unit of measure (UOM) indicates the measuring quantities used. To add units of measure;

1. Click on **Procurement and stores** then click on **Inventory UOM**
2. Click on **New.** Add the unit of measure name, add any notes then click on save.
3. To edit a unit of measure, double click on the unit of measure name or click once then click on **edit**, make changes then click **save**.

8.1.7 Inventory type

The inventory type indicates the categories of goods/services that the institution procures e.g. clinical supplies, electronics, stationery etc. To add a new inventory type;

1. Click on **procurement and stores** then click on **inventory type**
2. Click on New. Enter the item type, the validity period of the item, for instance, if it's a clinical supply/Drugs, the validity period may be 365 days. The periods should all be in number of days.
3. Add any descriptive notes then click on **save**.
4. To edit an inventory type, double click on the Inventory type name or click once then click on **edit**, make changes then click **save**.

8.1.8 Inventory list

Inventories can be added in two ways

1. Added One by one

- Click on **procurement and stores** then click on **Inventory list**
- Click on **New**. Enter/select the details as prompted then click on **save**

2. Added Using excel import

Follow the steps below;

Step 1: Prepare the excel sheet to include the columns below. The columns must be as shown in the excel sheet format.

CODE	NAME	TYPE	UOM	MIN	MAX	CLASS	COMPANY	VATABLE ON SALES	VATABLE ON COST	SALES GL ACCOUNT	SALES TAX GL ACCOUNT	PURCHASES GL ACCOUNT	PURCHASES TAX GL ACCOUNT

Note: All the settings must be done before the excel sheet is prepared. Columns including the type, UOM, class and other columns have pre-set data in settings therefore these columns must be filled with the data exactly as it is pre-set in the ERP. Save the excel sheet in a location in your computer where you can easily trace.

Step 2: Click on the excel import button. This opens a window that allows for the excel sheet import.

Step 3: In the new window, click on '**browse'** to locate the saved excel sheet. Enter the excel sheet name then click on '**populate excel data'** to fill the grid with the data from the excel sheet.

Step 4: Once all the data is populated, click on '**validate fields'** button then click on '**process'** to save the data into the ERP system database. Wait for the process to complete.

Note: the ERP checks on the case of the column headers. Ensure that the columns' headers are all in uppercase.

Step 5: If any data has not been imported during the processing, it will be shown on the grid. Export this data to excel sheet for further scrutiny and editing. Click close once done.

8.1.9 Inventory price list

This can be done in two ways

1. Setting the prices one by one

- Click on '**Procurement and stores'** then click on '**inventory price list'**
- click on New. Enter/select the details prompted then click on **save**

2. Setting the prices in an excel sheet an uploading into the ERP

Follow the steps below;

Step 1: Prepare the excel sheet to include the columns below. The columns must be as shown in the excel sheet format.

CODE	COST	RETAIL PRICE	WHOLESALE PRICE	OTHER PRICE

Note: All the settings must be done before the excel sheet is prepared. Save the excel sheet in a location in your computer where you can easily trace.

Step 2: Click on the excel import button. This opens a window that allows for the excel sheet import.

Step 3: In the new window, click on '**browse'** to locate the saved excel sheet. Enter the excel sheet name then click on '**populate excel data'** to fill the grid with the data from the excel sheet.

Step 4: Once all the data is populated, select the effective date, click on '**validate fields'** button then click on '**process'** to save the data into the ERP system database. Wait for the process to complete.

Note: The ERP checks on the case of the column headers. Ensure that the columns' headers are all in uppercase.

Step 5: If any data has not been imported during the processing, it will be shown on the grid. Export this data to excel sheet for further scrutiny and editing. Click close once done.

8.1.10 Stores list

The stores list has the list of the storage rooms/areas/locations where the goods procured are kept and received when being delivered. To add a new store:

1. Click on **procurement and stores** then click on **stores list**
2. Click on New. Enter/select the information as prompted under the main details
3. Under the stock control section, select the type of store associated with the store being added.
4. Enter the notes then click on **Save**.

8.2 General Setups

8.2.1 Supplier Type

Check on section 2.4.4 on how to add supplier types

8.2.2 Supplier list

Check on section 2.4.4 on how to add supplier types

8.3 Procurement process

8.3.1 Bidding

A. Quotation

To prepare the quotation;

1. Click on **Procurement and stores** then click on **quotation**
2. Click on **New**. Enter/select the prompted data. The green (+) button is for adding the items while the orange (-) button is for removing the items form the list.
3. Once all the details are satisfactorily added, click on save if quotation is not needed in print form
4. If the quotation is needed in print form, after step two, click on **print quotation** to display a print preview.

The quotation number is autogenerated by the system.

B. Bidder prices

To view the bidders 'prices

1. Click on **Procurement and stores** then click on **bidders' prices**
2. Click on **New**. Enter the RFQ number of the quotation, enter the reference code (supplier code) of the supplier then press enter key to load the data.
3. Use the green (+) button and the orange (-) button to add or remove items from the list respectively
4. Click on **save** once done
5. To print an evaluation form, click once on the item on the grid list the click on **evaluation form**
6. To print, click once on the item on the grid then click on **print**

C. Bidders awards

1. Click on **procurement and stores** then **bidders' awards**
2. Click on **New**. Select the reference and the code. This will auto-populate the details of the selected reference and code.
3. Add any descriptive notes then click on **save**

8.3.2 Purchases

Has the following steps

1. Purchases/store requisition:

- Click on **procurement and stores** then click on **Purchases/store requisition**.
- Click on **New**. Enter/select the details as prompted then click on save, or click on print unapproved internal order to have a print preview of the document

2. Requisition approval

This is the second stage of the internal order.

- Click on **procurement and stores** then click on **requisition approval**
- Click once on the internal order to approve then click **edit** or double click. Confirm the details then enter/select/mark the areas appropriate for approval then click on **save**.

3. Preparation of the LPO/LSO

Local purchase orders can be prepared for a single supplier or multiple suppliers

- To prepare an LPO for a single supplier, click on **LPO/LSO** then click on **Single supplier**. Add the details as prompted then click on save, or click on print order to have the order in print form.
- To prepare LPOs for multiple suppliers, click on **LPO/LSO** then click on **multiple suppliers**. Click on the green (+) button to access a list of approved requisitions. To remove a requisition from the list, select the requisition from the list then click on the orange (-) button.

4. Receiving of goods and preparation of the goods receiving notes (GRN)

- Click on **Goods receiving (G.R.N).** this will display a list of already prepared GRNs on the list.
- To prepare a new GRN, click on the New button. Add the details as prompted then click on save
- To have the GRN as a printed media, once the details are added as prompted, click on print GRN.
- To print an old GRN document that was earlier prepared, click once on the GRN from the list then click on Print GRN
- To print a list of all the GRNs, click on print **grid**

8.3.3 Operations

1. Store requisition

Used to transfer stock items from one store to the other. To access this;

- Click on store requisition then click on **New**. Fill in/select the details as prompted then click on **save**
- To obtain the information on printed media, click on **print store requisition** after entering all the details
- To edit the information on a previously prepared requisition, click once on the requisition from the list or double click, make changes then click on **save**.

2. Stock acknowledgement

This contains a list of the internal store transfers. Click on stock acknowledgement to view, edit or print acknowledgement receipt.

3. Stock level

This is meant for viewing the amount of stock left in the stores

Click on stock level to access the list

- Items with a font colour of black have a status of Ok meaning that their level is still okay
- Items with font colour of green have reached their reorder level
- Items with a font colour of red are below the reorder level or are out of stock.

Appendix

This section narrates the abbreviations and symbols used in the document

%: wildcard used to mean '**all'** regardless of another search criterion used

ERP: Enterprise Resource Planning

GPA: Grade Point Average

GRN: Goods Receiving Note

GSSP: Government Sponsored School Programme

HELB: Higher Education Loan Board

KRA: Kenya Revenue Authority

LPO/LSO: Local Purchase Order/ Local Sales Order

NHIF: National Hospital Insurance Fund

NSSF: National Social Security Fund

PSSP: Privately Sponsored School Programme

RTG: Real Traffic Grabber

TRX: Transaction reference.
